

SHARK RS

Highly advanced privacy protection with Shark RS automotive window films

The most common cause of car cracking is that the valuables can be seen through the glass surfaces. If the insight into the car is prevented with a Shark RS window film, the risk of the robber is increased and he will rather look for a car where he can be safe. A light filter of even 96% can be achieved with the Shark RS automotive film series, protecting the cargo hold from curious looks.

Stable American quality

You won't find low-grade adhesive coloured films among SkyFol Shark automotive films. The RS series is a product of a leading American manufacturer; it is deep-dyed and it does not turn purple even after years. All Shark automotive films are made with a double scratch resistant coating, securing a scratch-free look in the long run. The Shark RS series provides a minimal heat protection only; its main intention is to protect privacy. If you are looking for a solution for the comfort of the passengers, we recommend the Shark HP or the NT series.

Long-lasting UV-protection

The SkyFol Shark RS automotive series contains UV inhibitors in the polyester and the adhesive as well, resulting in a protection of 99%. Inorganic compounds do not lose their performance even after years in contrast to organic compounds of several other manufacturers.

Spotless application

All members of the SkyFol Applicator Network are certified professionals with experience. You can calmly entrust your car to them; the application is going to be of excellent quality. One of our most important valuables is our car, we are going to appreciate your car as well. Someone who does not share this view cannot be a member of our network.

SkyFol documents and warranty

The SkyFol Shark RS automotive series has the license of the local transport authority. After the application, our contracted partners fill out a hologrammed Guarantee of Workmanship form about the product. The Shark RS automotive film series provides a guarantee of 3 years against peeling, delamination, bubbling and adhesive failure.
